6-3 Scale Drawings and Models. ©Glencoe/McGraw-Hill46Glencoe Pre-Algebra. When objects are too small or too large to be drawn or constructed at actual size, people use a scale drawing or a model. The scale is the relationship between the measurements of the drawing or model to the measurements of the object. The scale can be written as a scale factor, which is the ratio of the length or size of the drawing or model to the length of the corresponding side or part on the actual object.

size. The change between the original and the scaled drawing is generally represented by two numbers separated by a colon, like 10:1 (read as “ten to one”). The difference between the ratio numbers represents the factor by which the scaled image is enlarged or reduced.

How to Scale a Drawing: 12 Steps (with Pictures) - wikiHow

Scale drawings allow us to accurately represent sites, spaces, buildings and details to a smaller or more practical size than the original. When a drawing is described as ‘to scale’, it means that each element in that drawing is in the same proportion, related to the real or proposed thing – it is smaller or indeed larger by a particular percentage.

Scale Drawings and Scale Factor - Somerset Canyons

Scale drawings are typically used when objects are too small or too large to be drawn to their actual size. Maps, house plans, and biology cell drawings are examples of items that use scale drawings. When using a model, scale factor is always the ratio of the model's dimensions to the actual object's dimensions.

Sixth grade Lesson Scale Drawings | BetterLesson

The scale is shown as the length in the drawing, then a colon (":"), then the matching length on the real thing. Example: this drawing has a scale of "1:10", so anything drawn with the size of "1" would have a size of "10" in the real world, so a measurement of 150mm on the drawing would be 1500mm on the real horse.
