Remington and Klein's Infectious Diseases of the Fetus and ...

We documented fetal death associated with intrauterine transmission of severe acute respiratory syndrome coronavirus 2. We found chronic histiocytic intervillitis, maternal and fetal vascular malperfusion, microglial hyperplasia, and lymphocytic infiltrate in muscle in the placenta and fetal tissue. Placenta and umbilical cord blood tested positive for the virus by PCR, confirming ...

Early Release - Intrauterine Transmission of SARS-CoV-2 ...

Microbes capable of persisting in the mother as a chronic asymptomatic infection can also infect the fetus. The following chronic infections have resulted in fetal disease: malaria, T. gondii (only happens when the mother is immunocompromised), syphilis, hepatitis, herpes zoster, and HSV. Congenital CMV and HIV infections have been observed in infants from consecutive pregnancies of the same mother.

Infections of the Fetus and Newborn Infant

Syphilis is a type of sexually transmitted infection that can have devastating effects on a developing baby if the disease isn't detected and treated during pregnancy. Women with untreated syphilis during pregnancy have a 25 to 50 percent chance of suffering a miscarriage.

Diseases That Affect a Developing Baby | Healthfully

Maternal infections that can damage the fetus include cytomegalovirus infection, herpes simplex virus infection, rubella, toxoplasmosis, hepatitis B, and syphilis. Give antibacterials to pregnant patients only when there is strong evidence of a bacterial infection and only if benefits of treatment outweigh risk, which varies by trimester.
