In order to achieve this, we will need to use an SD card and LiPo battery. And after measuring the approximate current consumption of the whole Arduino GPS tracker at roughly 120mA-180mA, I decided to use an 850mAh battery, which yields 5-6 hours of tracking and saving to the SD card.

What is an SD card and What Does it Do?

The chapter has many simple to complex projects to show how secure digital (SD) card projects can be built and how SD cards can be used as a large external storage medium. The projects are organized in increasing complexity and hence the reader is advised to start learning from project 1 and move to complex projects for better understanding.
