Water Transport Origins & Early Evolution - Google Books

Alternative Title: marine transportation Shipping, transporting of goods and passengers by water. Early civilizations, which arose by waterways, depended on watercraft for transport. The Egyptians were probably the first to use seagoing vessels (c. 1500 bce); the Phoenicians, Cretans, Greeks, and Romans also all relied on waterways.

Shipping | water transportation | Britannica

Early human habitations were often built next to water sources. Rivers would often serve as a crude form of natural sewage disposal. Over the millennia, technology has dramatically increased the distances across which water can be relocated. Furthermore, treatment processes to purify drinking water and to treat wastewater have been improved.

History of water supply and sanitation - Wikipedia

Canals were developed in the Middle Ages in Europe in Venice and the Netherlands. Ramps for water were made in 1459. Pierre-Paul Riquet began to organise the construction of the 240 km-long Canal du Midi in France in 1665 and it was opened in 1681.

Early Boats and Horses The first mode of transportation was created in the effort to traverse water: boats. Those who colonized Australia roughly 60,000–40,000 years ago have been credited as the first people to cross the sea, though there is some evidence that seafaring trips were carried out as far back as 900,000 years ago.

The Brief History of Transportation

In early modern India and Arabia the la teen-sail ship known as the dhow was used on the waters of the Red Sea, Indian Ocean, and Persian Gulf. □ Dhow is the generic name of a number of traditional sailing vessels with one or more masts with lateen sails used in the Red Sea and Indian Ocean region.

History of Water Transportation by Maria Maika Correa on ...

The modern era of maritime transport was ushered in by the advent of the steam engine. Wooden ships and sail gave way to iron ships powered by steam. A long era of growth in maritime transport followed as trade needs were served more efficiently, and transport activities could be better predicted.

Water Transport Systems and Port Developments

The Early Days: The Early Days Most likely the earliest form of water transportation was a single log found floating in the water. Later, groups of logs might be lashed together into a crude raft. These were utilized well into the 20 th century.
